Resilience

Practices of resilience

promote a multidisciplinary network to disseminate issues related to resilience, sustainability and climate change [integrating social, environmental and economic]

interested people + associations (environmental, social issues, ... public administrations)

43 people (**Active members**) with different background, professional positions and skills

- senior practitioners and consultant in the field of environmental planning, biodiversity, landscape and risk management.
- young researchers: PhD students or young practitioners in the fields of sociology, geography, engineering, ecology, planning and architecture
- senior researchers of different universities: Bologna, Politecnico of Milano, Politecnico of Torino, CURSA and research centers

Coordination committee (6 Active members + 1 coordinator)

4_ REsilienceLAB network: innovation and identity

Network for the promotion of urban and territorial resilience strategies. Innovative aspects of our network are:

- **open and dynamic** network of people: the idea is to organise a network without a “bureaucratic” and fixed structure. REsilienceLAB is integrated and supported by existing associations network
- **collaborative**: REsilienceLAB is developing initiatives with existing networks of cities, universities and other associations in relation to specific activities ;
- **flexible in the “resilience concept”** definition: the goal is to maintain open the debate sharing different positions and approaches to reinforce the richness of debate;
- **operative oriented**: REsilienceLAB is an operative network supporting resilience and sustainability initiatives and focussed on sharing practices and knowledge diffusion;
- **social oriented and no-profit network**: the initiatives are non-profit actions. They also involve non-profit associations and NGO's;
- **European networking**: national network is linked to European networks on resilience (as RRMS of AESOP, URB-NET ...)

5_ Action domains

Activities domains of the network are:

- comparison of experiences and proposals (with a theory-practice-theory approach) through the organisation of seminars, workshops ...
- promotion and support of resilience initiatives (community involvement, support actions and initiatives in transition, operationally initiatives that can involve the citizen towards sustainable patterns and behaviours and / or adaptive / resilient)
- training and information of "technical" (public and private) audiences, public administrators ...
- training and information for citizen, population, schools
- networking activities: establish a connection with and between territorial entities that are already implementing practices of resilience in their territory.

6_ Initiatives (2013-2014)

seminars and meetings: we have already organised several seminars on urban resilience (hosted by Politecnico di Milano). During seminars we also discussed on the structure, contents and aims of REsilienceLAB and we were able to involve new members.

workshops on urban resilience (January-September 2014)

organisation of four research workshops (mostly involving the national Italian context). The workshop are organised with the DASTU Dep. (International Cooperation lab) of Politecnico of Milan.

The workshops have the general title of “Urban resilience: a conceptual reframing and action instruments”.

The 4 workshops title are:

- 1_ urban resilience and rural vulnerability (January 2014)***
- 2_ resilience and new urban agenda (March 2014)***
- 3_ urban resilience and regeneration processes (June 2014)***
- 4_ resilience in a local/global perspective (September 2014)***

6_ Initiatives (2013-2014)

International conference

The international conference on “Water/Energy/Food: nexus in peri-urban territories” is promoted by Politecnico of Milan (international cooperation lab of Department of Architecture and Urban Studies). The REsilienceLAB is involved in the organisation of the conference

Training and involvement

Series of seminars on urban and territorial resilience - Fondazione Cariplo
4 events on the topics of urban resilience about the Capacity Building program, for those who wish to participate to "Resilient Communities" announcement by Fondazione Cariplo

website and communication: REsilienceLAB is working on the website implementation: a first basic version of the website is already on line (www.resielincelab.eu) but we are planning a new version (able to include more contents and catch wider range of people).

Osservatorio delle pratiche di resilienza

[percorso delle pratiche | la mappa della resilienza]

Avviare una mappatura delle iniziative di resilienza a livello nazionale

Osservatorio pratiche di resilienza

Avviare una mappatura delle iniziative di “resilienza” a livello nazionale

Sviluppare un insieme di strumenti e criteri progettuali a supporto della diffusione di pratiche di resilienza

Promuovere un avanzamento scientifico delle/sulle pratiche di resilienza e di transizione basato sulla ricerca applicata al territorio e alle Comunità

Promuovere la creazione di una rete di soggetti e attori (networking)

Il percorso delle pratiche o “la mappa della resilienza”.

Il percorso metodologico o “gli strumenti della resilienza”

Il percorso culturale o “il pensiero della resilienza”.

Il percorso del networking o “i soggetti della resilienza”

Osservatorio delle pratiche di resilienza

Appuntamenti

28-29.03.2014 - NEXUS

Workshop internazionale sul tema PERI-URBAN AREAS AND FOOD-ENERGY-WATER NEXUS, SUSTAINABILITY AND RESILIENT STRATEGIES IN THE AGE OF CLIMATE CHANGE organizzato dal Laboratorio di Cooperazione Internazionale del DASIU in collaborazione con REsilienceLAB e con il Laboratorio di Simulazione

REsilienceLAB

REsilienceLAB si costituisce come una rete di persone che con approcci e sguardi differenti hanno lavorato e lavorano sui temi della sostenibilità, dell'adattamento e della resilienza urbana e territoriale.

La rete si propone come supporto della promozione di azioni e strategie di resilienza.

I motivi

Negli ultimi anni i concetti di RESILIENZA e di CITTA' RESILIENTE si sono largamente diffusi a livello politico, accademico e comunitario sia in Europa che nel mondo. Nel contesto italiano, questi concetti hanno avuto una diffusione
